

Sunex

Digital Imaging Expertise from Design through Production

Company

Sunex Inc. specializes in the design, development, and production of miniature digital imaging lens for CMOS/CCD image sensors. Other products produced include optical low pass filters [OLPF] and IR-Cutoff filters. Sunex provides optical design services and custom product development.

Customer & Technical Support

We are dedicated to assisting customers with all aspects of the design-to-production process, as well as providing responsive and knowledgeable support. Located in Southern California, we are able to easily support all North America and European customers with our staff of Optical Sales Engineers. We also maintain a web site [www.optics-online.com] to provide free optical design support for engineers who need to choose the best imaging solution for their application.

Markets Served

Sunex Inc. is positioned to serve the global CMOS/CCD market. Our high performance lenses are used in many applications including Security; Automotive; Video Conferencing; Bar Code Scanning; Surveillance; and Mobile Imaging.

Imaging Lenses

- High Resolution
- Wide Field of View Lenses up to 185°
- Compact and Low Cost Designs
- Off-the-shelf Lenses & Custom Design Services

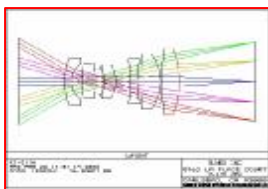

Filters

- IR Cutoff and Optical Low Pass Filters
- Off-the-shelf Products
- Custom Design Services Available

Lens Holders

- Lens holders for a variety of lens threads
- Available Off-the-shelf
- Custom Designs

Custom Lens Design Services

- Wide-angle Tailored Distortion Designs
- Fisheye Designs
- Unique Imaging Designs
